Cosmin Pănescu

Front End Developer

I like to build things for the web. To be more explicit, I like Web Development and Digital Marketing. On the web development side, I mainly focus on Front-end because I like to be creative, and when it comes to digital marketing, I focus mostly on SEO.

EDUCATION

Cybernetics
University of Bucharest

10/2022 - Present

PERSONAL PROJECTS

Digital Marketing Agency
- A website for a digital marketing agency (Amaisse Agency). Excluding my personal website, this agency project is the most recent I've worked on. I focused both on the logic part, the actual programming, but also on the entire design part, where I used Figma.

Netflix Clone
- A clone of Netflix, using the API. Thus, we can display movies and series by category, including the 'Most Viewed' and 'Netflix Originals' categories. At the same time, each category is updated weekly, displaying updated content.

Crypto Tracker
- A multi-page application that displays cryptocurrencies by market cap. The first page displays the cryptocurrencies along with their main information, and the second page displays detailed information about the cryptocurrency chosen by the user. You can also search for any coin in real time.

Web Tools
- This application contains three tools: a complex password generator with multiple possibilities, a generator of real QR codes for links and a generator for real shortening of links.

First Step In Business
- This is the largest project of the Faculty of Business in Bucharest. It involves 3 stages: participation in workshops conducted by entrepreneurs, creating a complex business plan, presenting the plan and business idea to Romanian entrepreneurs. In this project I took 2nd place, where I won numerous awards.

WORK EXPERIENCE
